

ABSTRACT

A print head cap includes: a bottom surface; and a ring-like lip. The ring-like lip ~~surrounding~~ surrounds the bottom surface, ~~like a ring and protruding~~ protrudes toward a nozzle surface of a print head of an ink jet printer and ~~being~~ is elastically deformable. The ring-like lip is ~~to be~~ pressed onto the nozzle surface to cover the nozzle surface therewith. The ring-like lip has corners that change a ~~the~~ direction of surrounding the bottom surface. The corners of the ring-like lip are more elastically deformable than the other ~~portion~~ portions of the ring-like lip.
